

PROXIED PRINTING SERVICES

Abstract of the Disclosure

[00037] Embodiments of the present invention provide methods, an image processing device, a computer network and a simple network printer wherein a simple network printer without RIP capability is enabled to print a print job that includes raster image processor instructions. In one embodiment of the method of the present invention, the steps include receiving and storing, by the simple network printer, a broadcast from a raster image processor (RIP)-enabled unit announcing the RIP-enabled unit's capabilities and, upon receiving a RIP print job request from a source, requesting the RIP-enabled unit to proxy the print job and send the print job in simple format to the simple network printer for printing.
